

**Amendments to the Abstract:**

Please amend the abstract as follows:

~~The invention concerns a~~ A revolving case (1) ~~comprising~~ comprises a base (2) mounted mobile in axial rotation relative to a tubular body (3). ~~wherein is mounted mobile a~~ A slide (4) for receiving a product to be protected is movably mounted in the base, the base (2) ~~comprising~~ comprises a guide means (20) for driving the slide (4) in axial translation ~~relative thereto~~ when said the base (2) is axially rotated relative to the tubular body (3)[[.]]. The ~~the~~ axial rotation of the base (2) relative to the tubular body (3) ~~being further designed to~~ drives the slide (4) simultaneously in rotation and in axial translation relative to said tubular body (3). ~~The invention is characterized in that the~~ The height of the slide (4) and the height of the guide means (20) are not greater than the external height of the base (2).
